

### Statistics prerequisite petition

In my academic history I have taken a three-credit quantitative biology course which integrated statistics into biological contexts. In this course, statistics was heavily integrated into the course content in which essential topics were covered such as hypothesis testing, significance, different types of distributions and what they mean, variables, and more in detail. In addition, I took a five-credit field ecology class, which also incorporated statistics within the course content and I was able to apply statistical analysis to my research papers. I am confident that my past academic experience in statistics will serve me effectively at Evergreen.
