

I have been working on my veterinary technician's degree (Associates) through Penn Foster since 2019. I have attached my transcript from this program and am starting my externship soon. I have also been working for the past 5 years in veterinary medicine and 4 of those years have been with the military. Since I work at a teaching hospital, I am constantly being exposed to new biology.

I have spent years conducting statistics in high school as well as in college. Each one of my classes in college heavily relied on statistical analysis, including my senior thesis. I have not been conducting basic probability, binomial and/or normal distributions, null hypothesis testing and p-values, and some specific statistical tests such as t-test, chi-square test, regression, but I have confidence in myself to relearn and pick up how to conduct these quickly.

For the past 4 years, I have been surrounded by people who have lived among multiple different cultures. I am constantly discussing cultural differences between here in the United States and where people will be traveling to. I think taking another SOAN class would greatly benefit me. I would like to do so during my masters degree as I believe it will
