PREREQUISITE INFORMATION
Add a short statement explaining your plan for meeting prerequisite requirements before starting the MES program.

To meet the prerequisite requirements, I will take the Introduction to Statistics course through StraighterLine, which provides three college credits. I have already taken multiple Social Science and Natural Science courses at Sterling College, as showcased on my transcript. While I would have preferred an in-person course on Statistics, I understand my financial constraints and have chosen the most practical option for me at this time. I am saving for the holistic and interdisciplinary Master's program at Evergreen, a goal that I am looking forward to. Moreover, my experience studying online during my middle and high school years has provided me the confidence and hope to comprehend the course material including the basic concepts of probability and statistics, while also focusing on applications of statistical knowledge.
